

ABSTRACT OF THE DISCLOSURE

A method for setting configuration data of
a printer for a printer driver in a server is provided,
in which the server is used in an image printing system
5 that includes a client, the printer and the server
including the printer driver for the printer. In the
method, the server stores the configuration data
obtained from the printer, and a configuration data
obtaining part in the server reads the stored
10 configuration data according to a request from the
printer driver, and sends the configuration data to the
printer driver.
